viously described, shows increase of blood sugar and decrease of inorganic phosphate in the serum after glucagon were confirmed. In contrast to Appel and in agreement with Bondy and Cardillo, a significant decrease of the total amino acids in the serum was found. After 2 hours they fall to a minimum of 73% of the initial value and after 6 hours return to normal values. (Author)

and their evaluation. Part II discusses investigations of the propeller element, the relation between efficiency and power, relation between pitch, blade-width ratio and power, effect of a diffuser, irregularity effects. Part III considers the behavior of the entire propeller. Part IV treats the effect of the propeller on the airplane. An appendix contains a compilation of propeller tests and a bibliography are contained in the appendix.
